

CENTRAL SECURITY & COMMUNICATIONS

CSC Fire Alarm Systems

Central Security and Communications (CSC) is proud to offer a full range of fire protection services from inspections and maintenance, to professional certified system design and installation. We differ from other security or fire protection companies by providing a complete turnkey system, including pulling and certifying the wire to monitoring the system.

We strategically choose our product line to be able to provide protection on the smallest of residences to the largest of industrial and distribution warehouses. With NICET Level 4 Engineers on staff, we are consistently training and applying the latest code on all of our jobs. The in-house CAD department allows CSC to submit your professional drawings.

Let CSC be your fire alarm system provider to ensure that your employees and family are safe, within code and that your facility can operate with no delays or penalties.

CSC works closely with fire marshals to provide on time delivery, proper installation and successful inspections.
